Design and Deveopment of a pedagogically constrained Artificial intelligent-Based Educational Video Generator Using Retrieval Augmented Generation, Knowledge Graphs

Chapter one

introduction

1.1 Background of the study

Education is one of the most important drivers of human and societal development. Education helps individuals to acquire knowledge, skills, values, and competencies that enable them to improve their quality of life and contribute to economic and social progress. The world has become increasingly knowledge-driven, and with it, the demand for effective and accessible learning systems has grown. Consequently, improving the quality of teaching and learning has become a major concern for educational institutions worldwide (World Bank, 2018).

Educational practices have been significantly transformed by advances in information and communication technologies. Digital learning technologies have granted more access to education by enabling learners to get instructional materials anytime and from any location. Technologies such as online learning platforms, learning management systems, and mobile applications have changed the traditional classroom environment and created opportunities for more flexible and learner-centred education. These developments have made digital learning an essential component of modern educational systems (UNESCO, 2023).

There are several digital learning tools available, among which instructional videos have emerged as one of the most effective resources for teaching and learning. Video-based learning combines visual and auditory information, making abstract concepts
